Frank Gold, D.D.S.

Our Questionnaire Can Help You Assess Your Risk Of Periodontal Disease!

Periodontal diseases damage gums, and eventually, tooth loss. the teeth, gums and jawbone of Moreover, periodontal diseases more than 70% of Canadians by can result in the release of the age of 45, and adults past harmful bacteria into the blood- the age of 35 lose more teeth as stream, and have been linked to a result of periodontal diseases an increased risk of other seri- than from cavities. Periodontal ous diseases, including cardio- diseases are usually painless vascular disease. So by improv- until their advanced stages and ing their periodontal health, if left untreated can result in bad adults may lower their risk of breath, red, swollen & bleeding heart attack and stroke.

Please Take Our Periodontal Health Questionnaire

Remember, most people don't experience pain with periodontal diseases, so if you suspect that you have any of the following symptoms or conditions, you should schedule an appointment with us for a complete evaluation. Unfortunately, sometimes even with the most diligent home care, people can still develop some form of periodontal disease. Once this disease starts, profes- sional intervention is necessary to prevent its further progress. W hen your periodontal health has been evaluated, we'll work with you to determine the treatment options that are best suited to arrest the disease and bring you back to optimal dental health.

- Do your gums bleed during brushing? Yes No
- Are your gums red or swollen? Yes No
- Are your gums receding from your teeth? Yes No
- Do you have persistent bad breath? Yes No
