Mini-Implant Supported Dentures Offer Many Benefits To Denture Wearers!

If you're tired of uncomfortable, ill-fitting dentures that can collect food debris under them, cause frequent mouth sores, and move or "click" when you speak, our doctors here at Source Dental in the Oshawa Centre may be able to help by providing you with beautiful, natural-looking and feeling replacement teeth known as mini-implant-supported dentures.

Sadly, conventional dentures don't function like your natural teeth because they can become unstable and lack retention, which prevents many denture wearers from eating the same kinds of quality foods that they enjoyed with natural teeth. The result can be poor nutrition, poor food digestion and ultimately poor health.

Over time, wearing conventional dentures, the underlying bone structure that supports the soft tissue in the mouth continues to dissolve, because a conventional denture can't stimulate the bone as a person's natural teeth would; and as more bone is lost, denture fit, comfort and function suffers.

This is one of the reasons many people find their conventional dentures to be uncomfortable and in frequent need of adjustment, impacting upon their quality of life by making chewing, speaking and smiling difficult and sometimes embarrassing.

It's also important to note that ongoing shrinkage of the jawbone can make a person's face look older, but mini-implant-

supported denture wearers can return to and maintain a more youthful, natural-looking appearance.

Mini-Implant-supported dentures can mean a life without oral pain, without unhealthy eating habits, and without embarrassment, enabling you to enjoy all your favourite foods again. Simply put, mini-implant-supported dentures can provide you with increased self-esteem, help you feel healthier, look better, and speak and smile with complete confidence, so that you can participate in any social activities you wish and enjoy life to the fullest. Moreover, a person's age is not a limiting factor. If you're in good health you should be able to benefit from all the advantages of mini-implant-supported dentures.

We believe that everyone deserves the opportunity to enjoy a healthy, functional, beautiful smile and now thanks to mini-implant-supported dentures there's no reason for conventional denture wearers to settle for anything less.

To learn how mini-implant-supported dentures could improve your oral function, confidence and personal appearance, just call our office to arrange an appointment. We will carefully examine your oral status, bone density and medical history to determine the type of mini-implant supported denture that may be best for you.

Yours for better dental health,
